Let's explore the technical history of the modern OTP and where it came from and how it got so popular. Chances are, the last time you used a Yubikey OTP was when signing up for a new account or authenticating yourself on a site that requires OTP. Because of how modern OTP works today, it will most likely be the first time you've seen this technology in action. To learn more about OTP and the Yubico YubiKey, [click here](#). What is OTP? One Time Password (OTP) is a technology invented in the 1980s to increase security for systems that require passwords to be remembered. This is in contrast to regular passwords that can be easily retrieved from long-term storage. An OTP is generated by a one-time password generator, and it's used to verify someone's identity based on something only they know: their OTP. Thus, an OTP is always generated, stored and delivered based on the secret that's given to the person using the service. This method of authenticating users is becoming increasingly popular. Wikipedia has an article about OTP written by Bruce Schneier, CTO of BT and CTO of Counterpane. Schneier clearly explains how OTP is the industry standard and why. How did it get popular? As OTP was being developed in the 1980s, the need for such a system was obvious. There were solutions already in place, but those were not considered adequate. A system was needed that enabled

Female genital mutilation (FGM) is a prevalent practice, affecting more than 28 million women and girls globally. Although there is no single definition or classification of FGM, the World Health Organization (WHO) defines FGM to include all procedures involving partial or total removal of the external female genitalia or other injury to the female genital organs. FGM is reported to take place predominantly in 39 countries with a total population of some 90 million. FGM represents an attempt to control female sexuality and improve women's "morality" through the creation of female genital deficiency. It can be performed on girls from infancy to puberty. The WHO estimates that FGM is carried out on an average of 100 million girls annually. To the best of our knowledge, there is no systematic documentation of the prevalence of FGM in the Middle East and North Africa, beyond Alexandria in Egypt. (2d Cir. 1973), the court said: 24 The language of § 3503(a)(1)(A) of the Code, says nothing about payment to the debtor, and the legislative history of that section is not enlightening on this point, but nothing in the Code indicates that its terms were intended to exempt one who has paid the money as income from being charged with its recovery as the property of the estate in the hands of the trustee. The section provides for the return of the property to the debtor for use or disposal as the debtor sees fit. 25 Id. at 819, n. 17. The language of § 3503(a)(1)(A) is clear and in the opinion of the court broad enough to cover the case of voluntarily paid funds paid for the debtor's discharge. The fact that the Bankruptcy Act of 1898, when § 3503 was enacted
