The first AutoCAD running on a desktop personal computer was named Visage (1986). It was a pre-release version of AutoCAD, and the first commercially released version of AutoCAD with the Visage name was released in 1988. Visage and AutoCAD were not initially released as a single product, but AutoCAD was first released as a desktop product in 1987 and Visage was first released as a CAD-only product in 1989. Although AutoCAD was designed to be a desktop app, it has always been capable of running as a server-side product, called AutoCAD LT, with no client-side software. The AutoCAD LT server can be run on a standalone server with no user interface or display. In this model, the server provides connectivity to AutoCAD through a proprietary network protocol. The AutoCAD LT server, released in 1998, provided the same functions as a traditional AutoCAD release, but the client side software was not included. The client-server version was bundled with AutoCAD LT until version 2009. Although AutoCAD was designed to be a desktop app, it has always been capable of running as a server-side product. If there are major changes between a minor release (an incremental release that does not affect the product) and a major release, then the major release number is incremented, but the minor release number is not changed. Thus, AutoCAD 14.2 and AutoCAD 2014.2 are two different products, and AutoCAD 16.0 and AutoCAD 2016.0 are two different products. The first versions of AutoCAD to support a 64-bit architecture were AutoCAD 2000, released in February 2000, and AutoCAD 2002, released in November 2002. The AutoCAD update process is an annual, incremental process in which software users install new functionality to their installed product. Because AutoCAD 2016.1 is a

It is the de facto standard file format for 2D CAD. DXF is often used to exchange both 2D and 3D drawing information. Its widespread adoption is attributable to the fact that it is human readable, machine-compatible and portable. Programming AutoCAD supports many programming languages: Autodesk Visual LISP (VLP), Visual LISP (VLP) uses LISP syntax to automate AutoCAD and other Autodesk products. Visual Basic for Applications (VBA) is a personal development environment for Microsoft Windows. VBA allows the design, programming and automation of applications for use within AutoCAD. C++ is a procedural language that is common in many forms of technical application development. The combination of C++ and object oriented concepts is known as C++ Object-Oriented. C++ is an imperative language, which means that it needs to be coded by declaring variable values and giving instructions. C++ itself has a distinct set of limitations that prevent the creation of true object-oriented programs. Microsoft's ObjectARX is a C++ object-oriented API for the AutoCAD/Map 3D/3DSIM product line. Other programming languages are also supported, including, AutoLISP, Visual LISP (VLISP) Fortran PowerBuilder, Eclipse Power Tools Community The Autodesk online community has more than 75 million registered users. These users are invited to share ideas, make suggestions, report problems, ask questions, participate in discussion groups, and create content, as well as evaluate Autodesk products and find solutions to their technical issues. Users interact on a variety of topics, ranging from drawing and modeling to design and drafting. In addition to software, the community also shares information about education opportunities, including learning resources, training, certification, and employment opportunities. History Origins AutoCAD, originally known as System Enhancement for 3D, was originally a product of Arnold in the United States. Arnold was acquired by NCH Software in 1988, and the company was renamed NCH Software Systems, Inc. Later in 1988, NCH sold its software assets to Autodesk. In 1990, Autodesk decided to remove System Enhancement for 3D from the product line. In its place, Autodesk developed AutoCAD, which included a 3D extension and a range of add-ons.
